

TNCHE Asia 2023 Conference
COP: Process scale up sharing
Presenter Bio data & Abstract

Name : Purachet Pitipuech

Company : SCGC

Current Position : Researcher

Working Experience : 13 years

Presentation Topic : Large scale manufacturing: Success and Lessons Learned

Presentation Abstract:

Following the materials development in lab-scale success, the companies will look toward up-scaling and commercialization, this presentation discusses some of the key issues to consider when planning for the scale-up of particle systems, with a focus on precipitation reactions. Results, process parameters, and process conditions obtained from laboratory studies for designing product features. The pilot plant process for process similarity and production of prototypes. The presenter will using case studies to examine some of the common pitfalls that have led to ineffective technology transfers, and demonstrates how these can be avoided that needs from early-phase development to prototypes supply, and on to commercialization.
